TABLE OF CONTENTS

- INTRODUCTION** 4
- HISTORY OF LATEX** 5
- MAKING MOLDS USING NATURAL LATEX** 23
 - tips and guidelines 25
 - #80 natural latex 27
 - additional available forms of natural latex 30
 - step-by-step instructions for use 31
- MAKING A FIBERGLASS MOTHER MOLD** 39
 - step-by-step instructions 41
- SPANISH TRANSLATION** 49
 - como hacer un molde de natural latex 51
 - como hacer el molde matriz usando fibra de vidrio ... 59
- MIXING POURABLE CONCRETE** 67
 - mixing cement 69
 - surface treatment of cast concrete 71
- WORKING WITH PLASTER** 73
 - qualities of different gypsum cements (plaster) 75
 - mixing, casting, and coloring plaster 76
 - trimming and patching plaster casts 80
 - making molds specifically for plaster 81
 - problem-solving tips for plaster 82
- WORKING WITH L-200 CASTING LATEX** 83
 - L-200 Casting Latex 85
 - making masks 89
 - making plaster part molds 93
 - additional details and method of casting 95
- MAKING MOLDS USING RTV'S** 97
 - preparation of model 99
 - polysulfides 99
 - polyurethanes 101
 - silicones 103
 - liquid plastics 104
 - polyester resins 105
- SPECIALTY PRODUCTS** 106
 - including releases, clays, and associated products

Cementex Latex Corporation has created a unique catalog and manual to help you understand how to make molds. This new manual emphasizes how to make molds with natural latex; Cementex is essentially a latex compounding company. Cementex Latex formulas for making molds with latex are used throughout the entire world. There is really no substitute for natural latex when it comes to flexibility and duplication of detail. Using a step-by-step method, the catalog and manual illustrates

how to make molds with natural latex. We have also developed videos to accompany the catalog. In addition, a section in Spanish has been included immediately following the English "How-to" sections.

With this catalog and manual, Cementex is introducing other mold making materials such as urethanes, silicones, and liquid plastic. We compound these products with the same care that has placed us in the forefront of the latex market.

There is also a section on auxiliary materials to assist mold makers in making Cementex a one stop mold making resource.

This catalog and manual would not have been possible without the tireless efforts of a few individuals who I would like to thank.

Mary Petruska and Bob Dombrowski for design and production.

Bob Dombrowski for writing the sections on working with materials and overseeing production of the catalog and both videos.

Laure Leber for photography throughout the catalog and her editorial capability.

Alberto Venegas for the Spanish translations.

Joe Behnke, master mold maker, for his time and efforts in making the videos and the "How-to" sections of the catalog.

Nancy Golden and Norm Franceour for their production of the latex mold making video.

Dorah Rosen and Rik Batten for their still photography and assistance with the production of the back-up mold making video.

Robin Hood for his production of the back-up mold video.

Herman Klein of Lions Creative Services for printing production.

I would also like to thank the *Malaysian Rubber Producer's Association*, the *Nunnikhoven Group* and *U.S. Gypsum Company* for granting us permission to share their research and information with you. And a special thanks to the many loyal customers of Cementex, with special appreciation to those who sent photos of the work they have produced with our products.

Arthur Gononsky

President, Cementex Latex Corp.
