

Technical Data Sheet **HX-CECO POWDER**

Overview

A high performance powdered additive to thicken liquid natural latex

Features

- Proprietary blend of powders and surfactants
- Thickens liquid latex rubber
- Improves “green strength” of a rubber mold
- Helps reduce the number of latex coats
- Helps to fill undercuts
- Helps round out the rubber mold
- Easy to use

Applications

- Coating for styrene
- Theatrical scenery
- Mask making
- Ornamental concrete
- Pre-cast concrete
- Brick and stone veneer

Usage

- Should be used after the fourth, or fifth coat of liquid latex has been applied
- Add between 5% and 15% of CECO Powder to your liquid latex
- Mix thoroughly into a thin paste, or putty
- When mixture can be dragged up side of bowl without sagging or dripping, its ready for use
- Apply multiple layers of thickened latex to achieve desired fill, and mold buildup
- Apply to the base of your model to help maintain shape
- Do not apply too thick, or drying issues will occur

Product Safety

The Safety Data Sheet (SDS) for this, or any Holden's Latex product, should be read prior to use and is available online, or upon request from Holden's Latex.
